Introducing New Cat M1 Communicators

Strong Signal Penetration and Network Longevity

LTE Cat M1 is one of the latest LTE technologies and offers some of the longest network longevity available. It was designed to support IoT solutions and offers carrier grade security, nationwide network coverage, and strong signal penetration in challenging environments such as underground and deep inside buildings.

The LTEM-XV and LTEM-XA Communicators operate on the LTE Cat M1 Networks offered from Verizon and AT&T. These serve as direct replacements for the LTE-XV and LTE-XA Communicators and share the same form factor, utilize the same accessories, installation and programming.

For more information on the LTEM-XV and LTEM-XA Communicators for VISTA Control Panels visit our website.
